Justin Beau

Cover Letter

Hi,

I hope you are doing well and in the best of health. I wish you the very best in your venture and startup, and continued success in your journey!

Nice to meet you, I'm Justin... not Mr. Trudeau, not Bieber, not Timberlake... justJustin

For nearly 10 years I have traveled, learning from others and on my own the value and promise that this space holds. I took time off from work, to code and invest, in learning as well as income, in order to profit in all ways from these emerging sciences. I am fascinated by technology!

I have been programming for 10 years now. I have lots of experience white box testing, and how important it is to have constant code reviews. Serverless architecture, smart contracts, databases, and boilerplates are all concepts that I study regularly. I like the progressive design of these modern apps, and I can't wait to see them evolve further, as I learn to read and speak the same languages as the greatest apps and developers in the world.

I also very much enjoy the concept of Next.js. Dynamic routing, data fetching, and APIs make components interesting and faster to render. AI is also very helpful, but it won't do everything for us. It still requires advanced learners to ask advanced questions, and it still takes an adept programmer to place all components and file structure in the proper paths.

Let me code, test, and iterate with you guys. After all, this is smart code for smart people, and one day, maybe everyone else! If you can lay the framework, it can be built.

Truly,

Justin Beau

ACCOUNT OVERVIEW

Account information

Name: Justin Beau	Person Systems Design Agile Developer
Email justmcfarlane@gmail.com	GitHub HeavyGuitarRiffs
Phone number	+1-(907)-359-8970
Address: 17108 International Blvd	Seattle New York Thailand Cambodia Japan
Communication preference	Phone WhatsApp +1-(907)-359-8970 Telegram - Svaalsbard Discord - metronome214

Company profile

Company name	J()$+|N
Industry	Computer Science
Company size	1-10 employees
Annual revenue	$15,000.00
Vision	$100,000.00 building new apps every day
What problems are they trying to solve	The Crypto Trilemma, Auth Testing in React Apps, POST Request
How are they going to solve them	Smart Contracts, Node Package Manager, and Backend Engineer
What value can we add or how we can help	Suggestions for better app creation in Lean and Sprint Apps

Past and current sales

Product	Value
Product name	$000/month
Product name	$000/month
Product name	$000/month

Future opportunities

Product	Value
Product name	$000/month
Product name	$000/month
Product name	$000/month

HEADWINDS / BLOCKERS

- Auth testing of React apps can be challenging
- Postman and backend testing of email logins
- Web 3 Integration into mobile apps
- Testing Web 3 apps on Android and IPhone devices

REQUESTS

- Define requests or actions needed to advance the project strategy
- Include requests for internal resources, such as personnel, budget, or marketing

- I would like to earn between $50,000 to $100,000 in the next 2 years, building relevant apps in the programming space
- Ensure that each week has a Scrum, where details and iterations are discussed with the team
